# Exploit your Data Galaxy and the GMOD Tool Suite

http://galaxyproject.org

http://gmod.org

### Agenda

# Introduction

Galaxy Worked example Deployment Options Community

## GMOD Software Community

## **Goal for this workshop**

Give you some idea what these open source tools can do, and how you might use them in your research.

This workshop will not cover details of how the tools are implemented or new algorithm designs.

# Are these tools timely?

### Are these tools timely?

Next Generation Genomics: World Map of High-throughput Sequencers Nick Loman, James Hadfield

http://pathogenomics.bham.ac.uk/hts/

### Agenda

# Introduction

# Galaxy

Worked example Deployment Options Community

# GMOD

Software Community

### **Galaxy URLs to Remember**

http://galaxyproject.org http://usegalaxy.org http://getgalaxy.org http://usegalaxy.org/galaxy101

## What is Galaxy?

- A free (for everyone) web service integrating a wealth of tools, compute resources, terabytes of reference data and permanent storage
- An analysis and data integration tool
- Open source software that makes integrating your own tools and data and customizing for your own site simple
- A part of **GMOD**

### Galaxy aims to

Enable accessible, reproducible, and transparent computational biomedical research.

### **Demo: Accessibility**

On human chromosome 22, which coding exons have the most known SNPs?

http://usegalaxy.org

## Galaxy: A Rough Plan

- Get some data
  - Coding exons on chromosome 22
  - SNPs on chromosome 22
- Mess with it
  - Identify which exons have SNPs
  - Count number of SNPs in each of those exons.
  - Identify exons with most SNPs

## http://usegalaxy.org/galaxy101

#### NGS: QC and manipulation

ILLUMINA DATA

- <u>FASTQ Groomer</u> convert between various FASTQ quality formats
- <u>FASTQ splitter</u> on joined paired end reads
- <u>FASTQ joiner</u> on paired end reads
- <u>FASTQ Summary Statistics</u> by column

ROCHE-454 DATA

- Build base quality distribution
- Select high quality segments
- <u>Combine FASTA and QUAL</u> into FASTQ

AB-SOLID DATA

- <u>Convert</u> SOLID output to fastq
- <u>Compute quality statistics</u> for SOLID data
- <u>Draw quality score boxplot</u> for SOLID data

GENERIC FASTQ MANIPULATION

- Filter FASTQ reads by quality score and length
- FASTQ Trimmer by column
- FASTQ Quality Trimmer by sliding window

#### Evolution

Metagenomic analyses Human Genome Variation EMBOSS

NGS TOOLBOX BETA

#### NGS: QC and manipulation NGS: Mapping

ILLUMINA

- Map with Bowtie for Illumina
- Map with BWA for Illumina

ROCHE-454

- <u>Lastz</u> map short reads against reference sequence
- <u>Megablast</u> compare short reads against htgs, nt, and wgs databases
- Parse blast XML output

AB-SOLID

Map with Bowtie for SOLID

### NGS: SAM Tools

NGS: Indel Analysis NGS: Peak Calling NGS: RNA Analysis

### RGENETICS

SNP/WGA: Data: Filters SNP/WGA: QC: LD: Plots SNP/WGA: Statistical Models

#### NGS TOOLBOX BETA

#### NGS: QC and manipulation NGS: Mapping NGS: SAM Tools

- <u>Filter SAM</u> on bitwise flag values
- · Convert SAM to interval
- <u>SAM-to-BAM</u> converts SAM format to BAM format
- <u>BAM-to-SAM</u> converts BAM format to SAM format
- Merge BAM Files merges BAM files together
- <u>Generate pileup</u> from BAM dataset
- <u>Filter pileup</u> on coverage and SNPs
- <u>Pileup-to-Interval</u> condenses pileup format into ranges of bases
- <u>flagstat</u> provides simple stats on BAM files

#### NGS: Indel Analysis NGS: Peak Calling NGS: RNA Analysis

### RGENETICS

SNP/WGA: Data; Filters SNP/WGA: QC: LD: Plots SNP/WGA: Statistical Models

### NGS: SAM Tools

#### NGS: Indel Analysis

- Filter Indels for SAM
- Extract indels from SAM
- Indel Analysis

### NGS: Peak Calling

- MACS Model-based Analysis of ChIP-Seq
- <u>GeneTrack indexer</u> on a BED file
- <u>Peak predictor</u> on GeneTrack index

#### NGS: RNA Analysis

RNA-SEQ

- <u>Tophat</u> Find splice junctions using RNA-seq data
- <u>Cufflinks</u> transcript assembly and FPKM (RPKM) estimates for RNA-Seq data
- <u>Cuffcompare</u> compare assembled transcripts to a reference annotation and track Cufflinks transcripts across multiple experiments
- <u>Cuffdiff</u> find significant changes in transcript expression, splicing, and promoter use

FILTERING

 Filter Combined Transcripts using tracking file

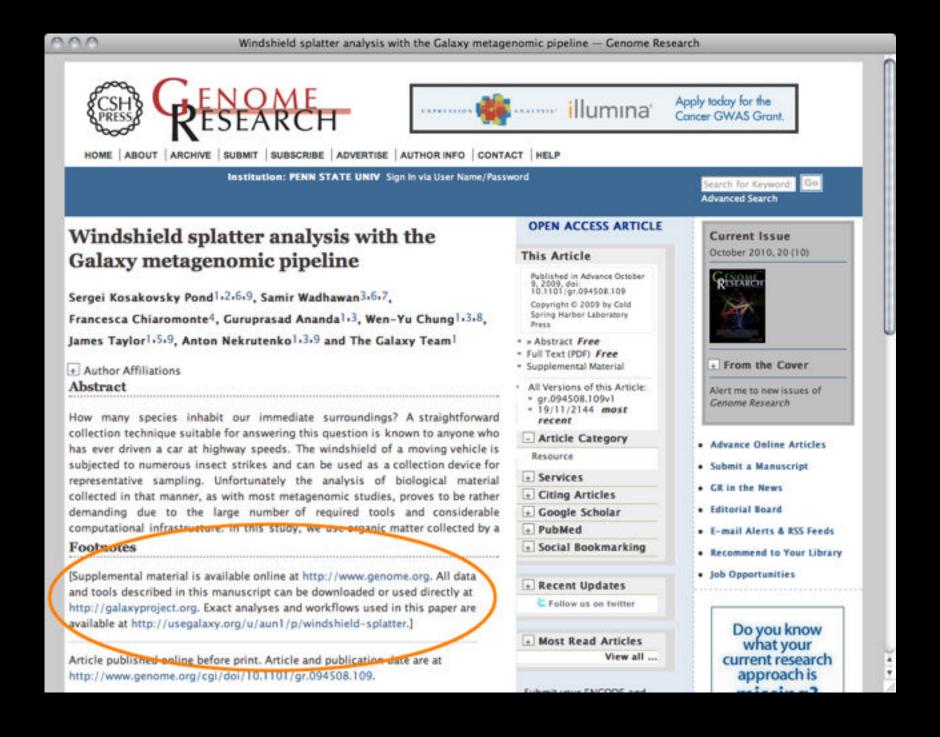

### Dozens of tools for different NGS applications packaged with Galaxy

### Galaxy aims to

Enable accessible, reproducible, and transparent computational biomedical research.

## Demo: Reproducibility and Transparency

http://usegalaxy.org

### Agenda

# Introduction

Galaxy

Worked example Deployment Options Community

# GMOD

Software Community

## Galaxy main site http://usegalaxy.org

- Public web site, anybody can use
- Hundreds of tools
- Persistent
- ~500 new users per month, ~100 TB of user data, ~130,000 analysis jobs per month, every month is our busiest month ever...

## But, it's a big world

Main has lots of tools, storage, processor, users, ...

- But not all tools there are thousands and adding new tools is not taken lightly
- But not infinite storage and processors main will continue to be maintained and enhanced, but with use limits and storage quotas

A centralized solution cannot scale to meet data analysis demands of the whole world

## Scaling Galaxy

So much data:

 Encourage local Galaxy instances and Galaxy on the cloud. Support increasingly decentralized model and *improve access to existing resources*

So many tools and workflows:

 Focus on building infrastructure to allow community to integrate and share tools, workflows, and best practices

## Local Galaxy Instances http://getgalaxy.org

Galaxy is designed for local installation and customization

- Easily integrate new tools
- Easy to deploy and manage on nearly any (Unix) system
- Just download and run, completely selfcontained! \*

\* Some assembly required.†
† But not much. ‡
‡ And help is on the way.

## Local Galaxy Instances http://getgalaxy.org

Galaxy is designed for local installation and customization

- Easily integrate new tools
- Easy to deploy and manage on nearly any (Unix) system
- Just download and run, completely selfcontained! \*

\* Some assembly required. †

- † But not much. ‡
- ‡ And help is on the way.

## Public Galaxy Servers http://galaxyproject.org/PublicGalaxyServers

### **Interested in:**

ChIP-chip and ChIP-seq? Cistrome **Statistical Analysis?** ✓ Genomic Hyperbrowser Sequence and tiling arrays? Oqtans **Text Mining?** ✓ DBCLS Galaxy **Reasoning with ontologies?** ✓ GO Galaxy Internally symmetric protein structures? ✓ SymD

## Scale up on existing resources

- Move intensive processing (tool execution) to other hosts
- Frees up the application server to serve requests and manage jobs
- Utilize existing resources
- Supports any batch scheduler that supports DRMAA (most of them)
- All levels of job running and scheduling are pluggable

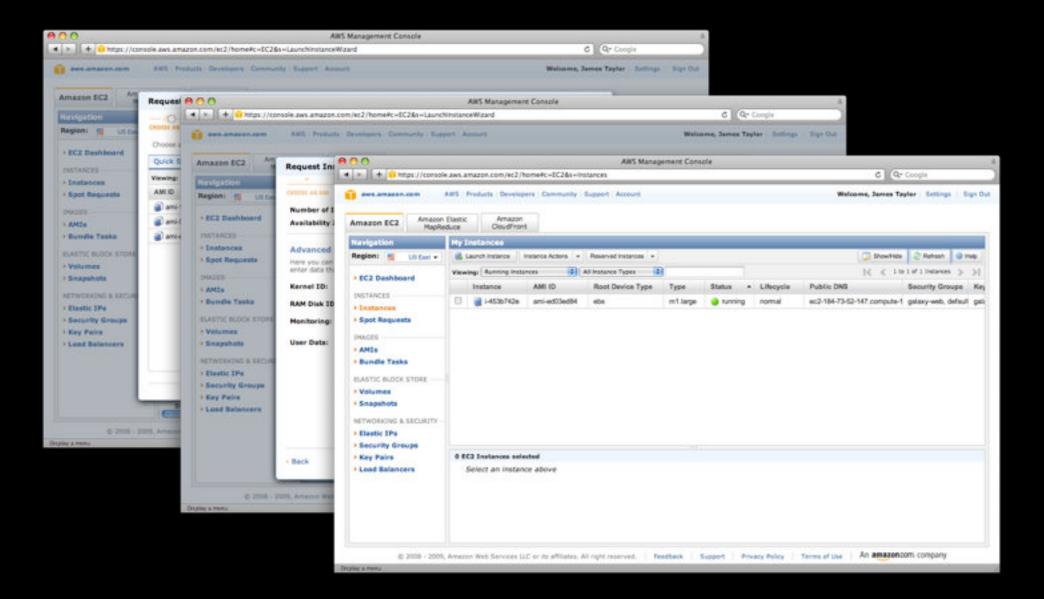

## Galaxy Cloud http://usegalaxy.org/cloud

- On-demand resource acquisition fits well with the irregular resource needs of many labs working with sequence data
- Our goal is to approach the ease of use of a "software as a service" solution while maintaining the flexibility and control of an infrastructure based solution

## Using Amazon EC2: Startup in 3 steps

 Galaxy Cloud

 Image: Comparison of the system of t

#### **Galaxy Cloudman Console**

Welcome to Galaxy Cloudman. This application will allow you to manage this cloud and the services provided within. If this is your first time running this cluster, you will need to select an initial data volume size. Once the data store is configured, default services will start and you will be add and remove additional services as well as 'worker' nodes on which jobs are run.

Can use like any other Galaxy instance, with additional compute nodes acquired and released (*automatically*) in response to usage

Tool installation and configuration, image creation, etc, all **completely automated and extensible** 

Cloud instances include all tools available in main Galaxy *and more* 

Same automation approach can be used for configuring tool dependencies for a local Galaxy

VM image with just tools available, currently at http://usegalaxy.org/vm

### Why we love clouds and cloud-like things:

Reasonably cost effective and efficient (elasticity + autoscaling definitely save money)

Analysis costs are more directly quantifiable

Infrastructure as an abstraction + standard APIs for provisioning reduces risk of vendor lock-in

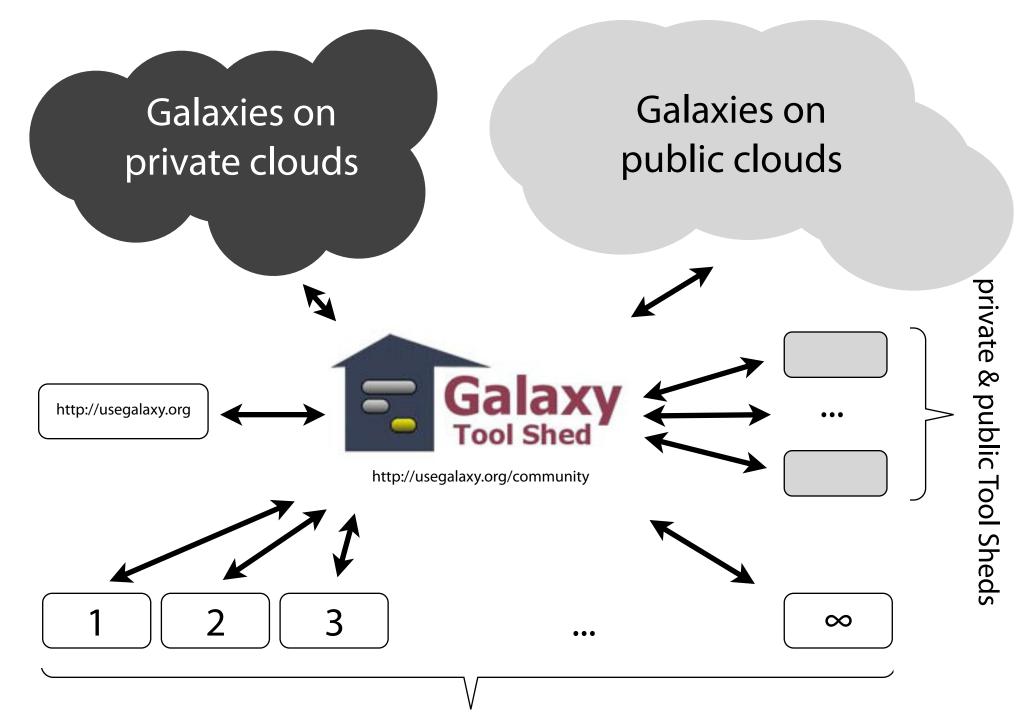

Virtualization makes so many things easier

## Some future challenges

- Capturing and automatically deploying tool dependencies, automatic tool acquisition in Galaxy instances
- Better interfaces for highly parallel analysis (e.g. running the same workflow across 192 individuals)
- Various workflow engine improvements, partial data streaming, combined experimental/ computational workflows

## **Galaxy Tool Shed vision**

- Allow users to share "suites" containing tools, datatypes, workflows, sample data, and automated installation scripts for tool dependencies
- Integration with Galaxy instances to automate tool installation and updates

### public and private Galaxy installations

	Repository Actions V
Clustal Omega	
Name for output files:	
co_alignment	
Output guide tree:	
🖂 Yes	
Output distance matrix:	
🖂 Yes	
Clustal-Omega is a general purpose multiple sequence alignment (MSA) pro quality MSAs and is capable of handling data-sets of hundreds of thousand	
In default mode, users give a file of sequences to be aligned and these are is used to guide a "progressive alignment" of the sequences. There are also to each other, aligning a sequence to an alignment and for using a hidden alignment of new sequences that are homologous to the sequences used to referred to as "external profile alignment" or EPA.	facilities for aligning existing alignment Markov model (HMM) to help guide an

Clustal-Omega uses HMMs for the alignment engine, based on the HHalign package from Johannes Soeding [1]. Guide trees are optionally made using mBed [2] which can cluster very large numbers of sequences in O(N\*log(N)) time. Multiple alignment then proceeds by aligning larger and larger alignments using HHalign, following the clustering given by the guide tree.

In its current form Clustal-Omega can only align protein sequences but not DNA/RNA sequences. It is envisioned that DNA/RNA will become available in a future version.

A full version of these instructions is available at http://www.clustal.org/

This is a beta version of Clustal Omega. Bugs should be reported to clustalw@ucd.ie

A standalone version of Clustal Omega for Linux/Windows/Mac is available from http://www.clustal.org/

## Introduction

Galaxy Worked example Deployment Options Community

## GMOD

Software Community

#### What is GMOD?

- A set of interoperable open-source software components for visualizing, annotating, integrating and querying, and analyzing biological data.
- An active community of developers and users asking diverse questions and facing common challenges with their biological data.

http://gmod.org

#### Who uses GMOD?

#### Plus hundreds, if not thousands, of others

#### **GMOD Server Requirements**

- GMOD is not a hosted solution
  - Usually
- Server
  - Most use Linux or other Unix variant
- GMOD System Administrator
  - Understands Linux package management, scripting, command line interfaces, relational databases, ...
  - Grad/Undergrad, half time when starting up

http://gmod.org/wiki/Computing\_Requirements

#### Agenda

## Introduction

Galaxy Worked example Deployment Options Community

> GMOD Software Community

#### **GMOD** Software

#### Visualization

- **GBrowse & JBrowse** genomic browsers
- CMap & GBrowse\_syn for comparative genomics

Annotation

MAKER & Apollo

Data Integration and Querying

• BioMart, InterMine, Chado

Analysis

• Galaxy, Ergatis, ISGA

#### **Visualization: GBrowse**

- Visualize features, SNPs, quantitative data, NGS data (uses SAMtools)
- Semantic zooming
- Custom tracks, shared tracks, DAS
- Highly customisable by both admin and end-user

#### GBrowse

Work by Yi-Hsin Erica Tsai & Ben Faga, using PhyloGeoViz

#### JBrowse

Skinner, et al., JBrowse: A next-generation genome browser, Genome Res. 2009. 19: 1630-1638

#### **GBrowse or JBrowse?**

#### GBrowse

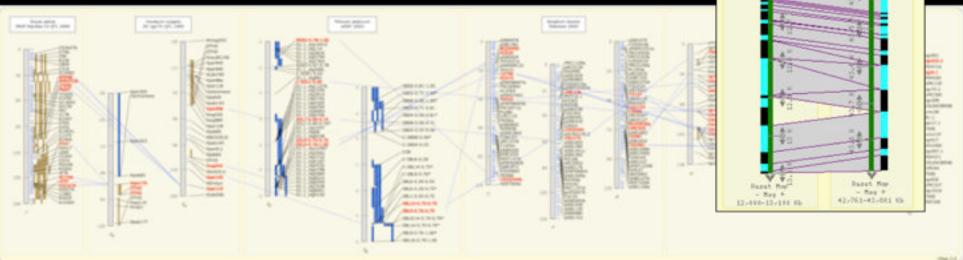

- Widely used
- Robust features & ecosystem
- Familiar interface
- Configuration is trail and error
- Requires more server
- Slower

#### JBrowse

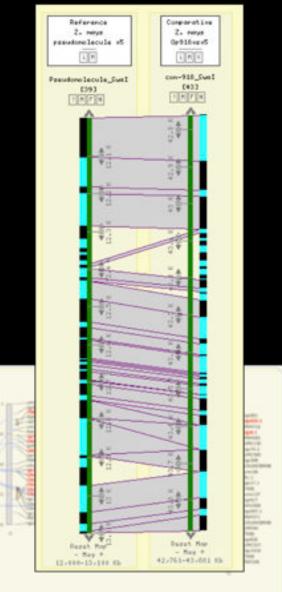

- Limited features
- Unfamiliar
- Lots of future development
- Configuration is simpler
- Requires less server
- Much Faster

#### СМар

- Comparative map viewer
- Data type agnostic. Can show linkage, physical, deletion, QTL, ....
- Anything that is points or regions on a line

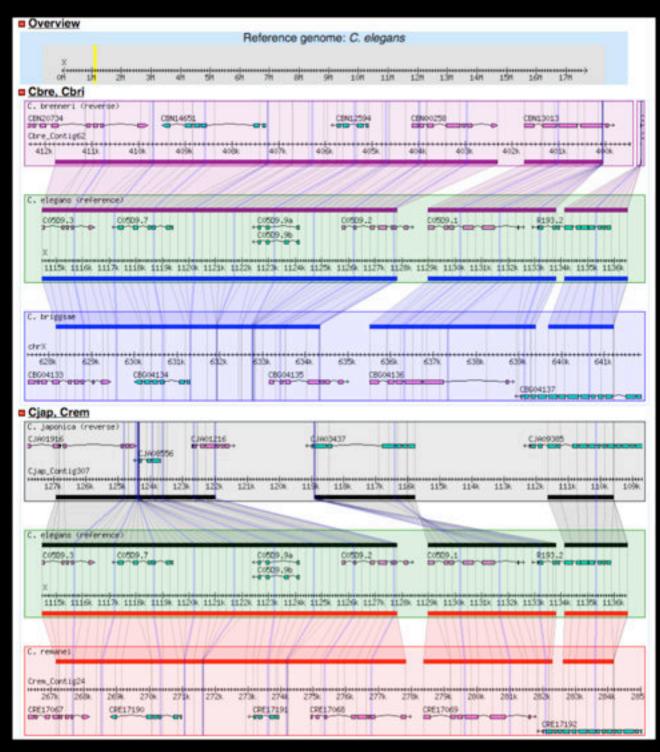

Youens-Clark, *et al.*, CMap 1.01: a comparative mapping application for the Internet, *Bioinformatics* (2009) 25 (22): 3040-3042.

## GBrowse\_syn

- Comparative genomics browser
- Shows a "reference" compared to 1 or more others
- Built on GBrowse and can show any GBrowse-based annotations

McKay, et al., Using the Generic

Synteny Browser (GBrowse\_syn), Current Protocols in Bioinformatics, Unit 9.12, September 2010

#### **GBrowse\_syn: Big Picture**

Raw genomic sequences

- Mask repeats
- (RepeatMasker and Tandem Repeats Finder, nmerge, etc.
- Identify orthologous regions Ĥ
- (MERCATOR, orthocluster, etc.)

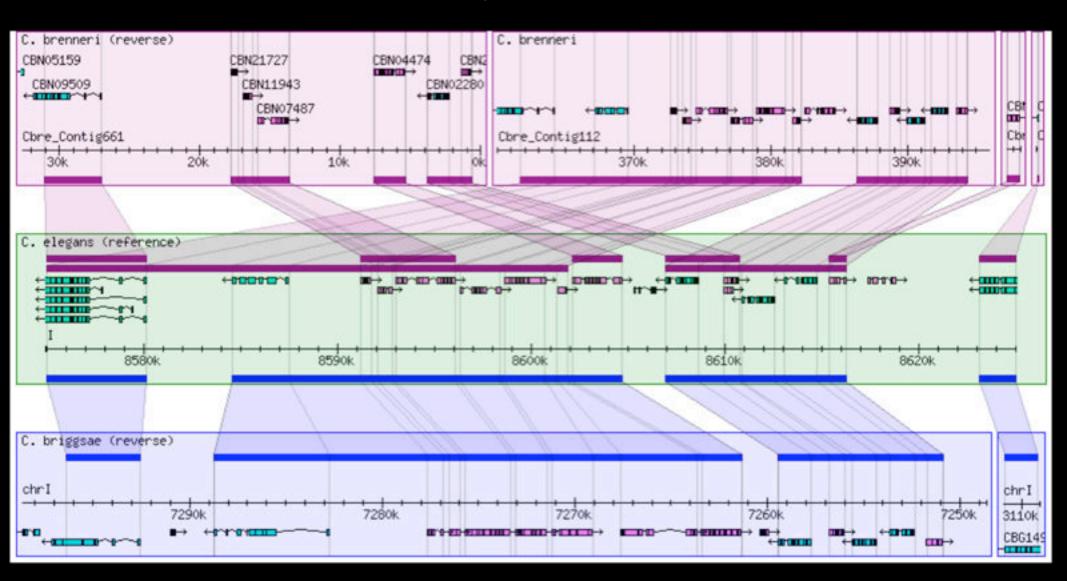

Nucleotide-level alignment (PECAN, MAVID, etc.)

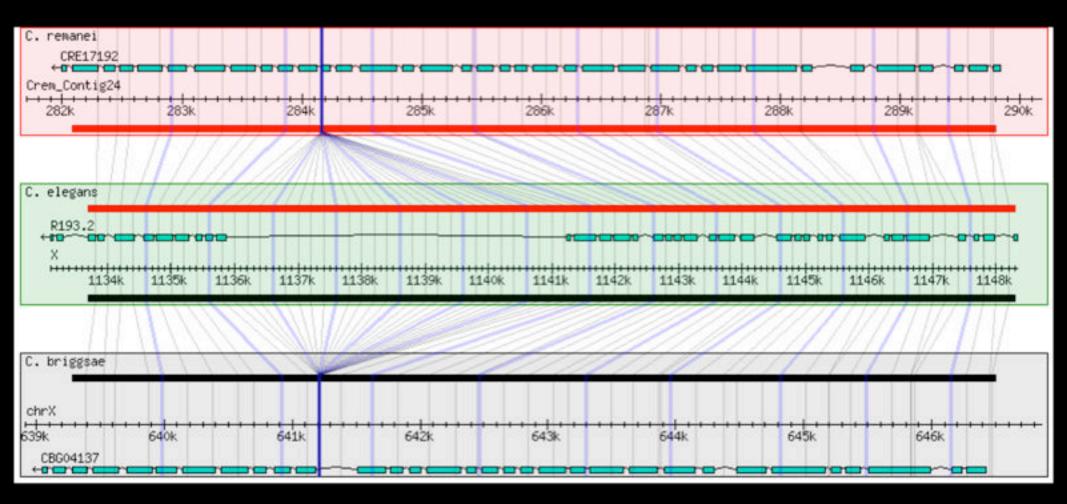

GBrowse

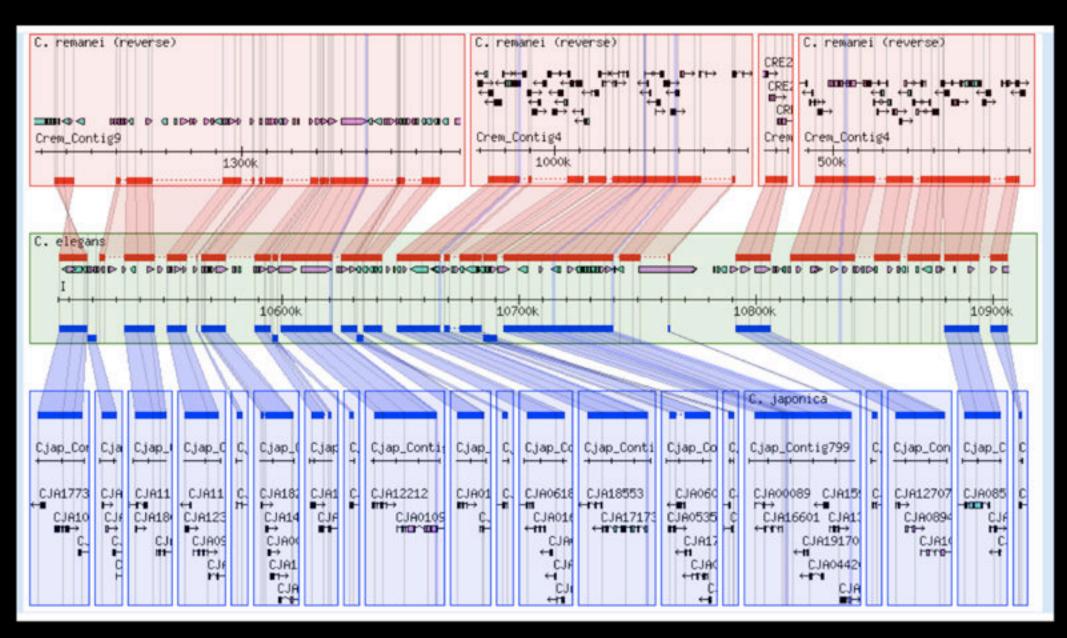

#### **GBrowse\_syn:** Duplications

#### **GBrowse\_syn:** Base level alignments

#### **GBrowse\_syn: Visual feedback on assembly**

Q: CMap or GBrowse\_syn? A: Not an either/or choice

## СМар

- Typically used when you have non-sequence based markers
- Popular in the plant community

#### GBrowse\_syn

- Used when to show multiple alignment data
- Can be orthology,
   region, or sequence
   based alignments
- Exploits GBrowse data sources and infrastructure

#### **Annotation: MAKER**

- Genome annotation pipeline for creating gene models
- Produces GFF3 and FASTA which can be loaded into GBrowse, JBrowse, Apollo, Chado, Galaxy, BioMart, InterMine, ...
- Incorporates SNAP, RepeatMasker, exonerate, BLAST, Augsustus, FGENESH, GeneMark, MPI
- Can also map existing annotation on to new assemblies and update existing annotations with new evidence
- Also available as a hosted service.

Cantarel, *et al.*, MAKER: An Easy-to-use Annotation Pipeline Designed for Emerging Model Organism Genomes,. *Genome Research* 2008 18(1) 188-96.

#### **Apollo: Manual genome annotation editor**

#### Data Integration & Querying: InterMine

#### Data Integration & Querying: Chado

- Chado is GMOD's core database schema
- A blueprint for organizing biological data
- Modular and extensible.
- Modules for IDs, sequence features, ontologies, attribution, ...
- Database backing many web sites from FlyBase to ParameciumDB
