# Galaxy for Core Facilities

# Association of Biomolecular Resource Facilities (ABRF2013) March 4, 2013

Dave Clements, Dannon Baker Emory University http://galaxyproject.org/

## Talk Complements ABRF Satellite on Saturday

- Saturday featured a live demo
- This talk introduces Galaxy and how it can benefit core facilities.
- For detailed hands-on training material, see the Galaxy learning hub page:

http://wiki.galaxyproject.org/Learn

# What is Galaxy?

- An open, web-based platform for accessible, reproducible, and transparent computational biomedical research.
- Galaxy is available as:
  - A free (for everyone) web service integrating a wealth of tools, compute resources, terabytes of reference data and permanent storage
  - Open source software that makes integrating your own tools and data and customizing for your own site simple
  - Free cloud images that can be deployed by informatics novices

### http://galaxyproject.org

# A free for everyone web service: usegalaxy.org

# Open Source Software: getgalaxy.org

- Galaxy is designed for local installation and customization
  - Easily integrate new tools
  - Requires a computational resource on which to be deployed

# http://getgalaxy.org

Local Galaxy Installs require a computational resource on which to be deployed

Control where tool execution happens

Galaxy works with any DRMAA compliant cluster job scheduler (which is most of them).

Galaxy is just another client to your scheduler.

Application API — www.drmaa.org

### Galaxy is available ...

 As open source software http://getgalaxy.org

On the Cloud

http://usegalaxy.org/cloud We used this during the satellite workshop.

http://aws.amazon.com/education

# On the Cloud: Galaxy CloudMan http://usegalaxy.org/cloud

- Start with a fully configured and populated (tools and data) Galaxy instance.
- Allows you to scale up and down your compute assets as needed.
- Someone else manages the data center

# Galaxy CloudMan

| Autoscaling Configuration     Autoscaling attempts to automate the elasticity offered by cloud computing for this particular cluster. Once     turned on, autoscaling takes over the control over the size of your cluster.     Autoscaling is simple, just specify the cluster size limits you want to want to work within and use your cluster as     you normally do. The cluster will not automatically shrink to less than the minimum number of worker nodes you     pedfy and it will never grow larger than the maximum number of worker nodes you specify.     While respecting the set limits, if there are more jobs than the cluster can comfortably process at a given time     autoscaling will automatically add compute nodes; if there are duter nodes sutting ide at the end of an hour     autoscaling will automatically add compute nodes; if there are duter and your cost.     Due turned on, the cluster size limits respected by autoscaling can be adjusted or autoscaling can be turned off.     Immum number of nodes to maintain:   | Man from Gal | axv   | Admin   Report bugs | I Wild I Scr |

# Galaxy CloudMan

#### CloudMan Console

Welcome to <u>CloudMan</u>. This application allows you to manage this cloud cluster and the services provided within. If this is your first time running this cluster, you will need to select an initial data volume size. Once the data store is configured, default services will start and you will be able to add and remove additional services as well as 'worker' nodes on which jobs are run.

20:05:11 - Saved nie persistent\_data.yami to bucket cm-/d9b3/159af226fd0084e65260

20:08:07 - Successfully mounted file system /mnt/galaxyIndices from /dev/sdg1

# Galaxy CloudMan

# Why Galaxy?

Galaxy was originally designed for researchers to learn and run tools and iteratively build multi-step analyses.

Biology has rapidly become data intensive, and dependent on computational methods

How can we ensure that these methods are accessible to researchers?

...while also ensuring that scientific results remain reproducible?

# Why Galaxy for Core Facilities?

# 1. Automate Your Analysis Pipelines

Define a reusable workflow (pipeline) by building/running an analysis interactively, and then extracting a reusable workflow from that analysis.

Once the workflow is defined you can run it repeatedly with different inputs.

- Via the web interface
- Via the AP

Simple example script that watches a folder for new files, imports that data to a data library, and then execute a workflow on it, creating a new history for each workflow invocation.

These 47 lines of (well commented) Python automatically start an analysis whenever files are ready for processing.

```
nome in os.listdir(in folder
           fullpath = os.path.join(in_folder, fname)
          if os.path.isfile(fullpath):
              dota - {}
               data['folder_id'] = library_folder_id
               doto['file_type'] = "duto"
              data['dbkey'] =
               data['upload_option'] = 'upload_paths'
               doto['filesystem_paths'] = fullpath
               doto['create_type'] = 'file'
               libset = submit(api_key, api_url + "libraries/%s/contents" % library_id, data, return_formatted =
               #TODO Handle this better, but the datatype isn't always
               # set for the followup workflow execution without this
              # pouse.
               time.sleep(5)
               for ds in libset:
                  if 'id' in ds:
                      # Successful upload of dataset, we have the ldda now. Run the workflow.
                      wf_data = ()
                       wf_data['workflow_id'] = workflow['id']
                       wf_data['history'] = "%s - %s" % (fname, workflow['name'])
                       wf_data['ds_map'] = {}

# 5. Enable clients to directly visualize results.

# 6. Enable clients to develop their own analyses *without*

- learning a programming language, command line / shell interfaces, Linux package management, ... or
- extensive hand-holding from core facility staff

# 7. Enable sharing of methods and results.

Galaxy Analyze Data Workflow Shared Data - Visualization - Cloud - Help - User -

#### Share or Publish Workflow 'Workflow constructed from history 'Basic Protocol 4"

#### Make Workflow Accessible via Link and Publish It

This workflow is currently restricted so that only you and the users listed below can access it. You can:

Make Workflow Accessible via Link

Generates a web link that you can share with other people so that they can view and import the workflow.

Make Workflow Accessible and Publish

Makes the workflow accessible via link (see above) and publishes the workflow to Galaxy's Published Workflows section, where it is publicly listed and searchable.

#### Share Workflow with Individual Users

You have not shared this workflow with any users.

Share with a user

# Galaxy for Core Facilities

- 1. Automate your analysis pipelines
- 2. Enable clients to see details of how results were produced
- 3. Galaxy's provenance and reproducibility for free
- 4. Enable clients to explore, tweak, and reuse your pipelines
- 5. Enable clients to directly visualize results
- 6. Enable clients to develop their own analyses without
  - learning a programming language, command line interfaces and shell, Linux package management, ...
  - extensive hand-holding from core facility staff
- 7. Enable sharing of methods and results.

**Big Picture** 

Galaxy Project

# Encourage Local Galaxy Instances

- Encourage and support Local Galaxy Instances
  - Support increasingly decentralized model and improve access to existing resources
  - Focus on building infrastructure to enable the community to integrate and share tools, workflows, and best practices
