

Accessible and Reproducible Data  
Analysis for Bench Scientists

---

**Meetups**

Galaxy is an open-source, web-based, x. Galaxy enables bench scientists to create, share, and publish sophisticated, reproducible bioinformatic analyses without requiring researchers to learn command line interfaces, or Unix system management skills. Galaxy can be accessed through the project's public server, or on one of the over 60 publicly accessible Galaxy servers. Galaxy can also be installed locally, and on cloud infrastructures.

This talk will introduce the Galaxy platform and discuss the project's recent work and plans going forward. Time allowing, there will also be a brief demonstration.

# Scalability ...

# Scalability

Data generation is cheap and will stay cheap.

Scale & complexity of analysis will continue to grow.

More researchers are running bioinformatics analyses of all scales and complexities.

Galaxy needs to scale to the next few orders of magnitude.
