Space Junk

Extra stuff in [the] Galaxy that you may not be aware of

Reports

your boss loves them

reports_wsgi.ini
run_reports.sh

Thanks Greg!

Monitoring

your server is on fire

galaxy-dist/scripts/check_galaxy.py
galaxy-dist/cron/check_galaxy.sh

Creates account (first time)
Logs in
Creates a new history (if you want)
Runs Intersect
Checks the output
Cleans up
Pages you at 3AM

Functional Tests

for your perfect code which in no way could possibly be considered hacky

run_functional_tests.sh
run_functional_tests.html

<test>
upload inputs
pick some params
run the tool
check the output against known good
compare with straight diff (some can differ)
compare with regex
</test>

Bonus!

When we upgrade Galaxy from Version 1 to Version 1, you can check your tools programatically

Maybe not a bonus since Galaxy never has bugs

galaxy-dist/contrib/

Init scripts for Linux, OS X, Solaris (SMF)
